Minimum and Maximum Modes For 8086 Microprocessor
In the maximum mode, there may be more than one microprocessor in the system configuration The components in the system are same as in the minimum mode system The basic function of the bus controller chip IC8288, is to derive control signals like RD and WR (for memory and I/O devices),

Minimum & Maximum Mode Systems
Minimum & Maximum Mode Systems In the minimum mode, all the control signals for the memory and I/O are generated by the microprocessor This reduces cost but provides low functionality In the maximum mode, a separate IC called the 8288 Bus Controller is used to provide control signals for memory and I/O operations
