Véronique Beauvois, Ir. 2018-2019

Earthing/grounding and EMC: For a lot of EMC phenomena (transient disturbances, HF currents...), earthing conductors are not efficient as they are very long and the used topology means a high impedance versus HF The only solution is meshing to get equipotentiality Mesh size: $\pm \lambda/10$

Grounding and Shielding Existing Equipment

Grounding and Shielding is an often misunderstood process It is common to hear This is why an EMC lab that is measuring signals from 30 MHz is greater than 10 m distance from the unit under test (UUT), since this is the wavelength of 30 MHz and they are using an E-field (voltage)
